INSTITUTE

IILM University, Greater Noida, U.P.

PROGRAMME

B.Tech CSE, Batch 2025-2029

INTERNSHIP DOMAIN

Software Development (Datacom)

COMPLETED ON

20th September 2026

ABOUT THE PROGRAM

Forage & Datacom

Datacom is one of Australasia's largest locally-owned IT services companies, founded in 1965 and delivering managed services, cloud, and custom software development to major private and government clients. Its Software Development Job Simulation, hosted on **Forage**, puts participants in the role of a developer reviewing and repairing a live web application.

Free & Self-Paced

No live sessions — guided by pre-recorded briefings from the Datacom team.

Industry-Designed

Tasks mirror the real review-and-fix work Datacom's developers do for clients.

Verified Certificate

Completion is confirmed with enrolment and user verification codes.

From Coursework to Real-World Code

Students usually write code from a blank file for problems with fixed requirements. Professional development is the opposite: the application already exists, other people wrote the code, and much of the job is reviewing what's there and tracing a reported defect back to its real cause — not patching the symptom.

This simulation closed that gap through one end-to-end workflow:

What the Simulation Set Out to Build

Review the Application

Assess functionality, user experience, code structure and maintainability.

Plan Improvements

Consolidate findings into a clear, prioritised set of recommendations.

Reproduce Defects

Trigger each reported issue reliably before touching any code.

Find Root Causes

Trace every symptom back to the logic actually responsible for it.

Implement Fixes

Correct the defect at its source, consistent with the existing code style.

Verify & Communicate

Confirm the fix, check for regressions, and document the outcome clearly.

The Toolkit Behind the Simulation

HTML, CSS & JS

Language of the reviewed web application

VS Code

Reading, navigating and editing the codebase

Browser DevTools

Console, elements and network inspection

Step-through Debugging

Breakpoints and isolation of failing inputs

Software Review

Functional walkthrough & maintainability check

Improvement Planning

Prioritising findings by impact and effort

Written Documentation

Review notes and defect explanations

Forage Platform

Task briefings and model-answer comparison

From Existing App to Verified Fix

Application Layer

The existing Datacom client web application under examination

Review Layer

Structured inspection of functionality, UX and code maintainability

Diagnosis Layer

Reproduction and root-cause tracing of each reported defect

Remediation Layer

Corrective changes implemented at the point of root cause

Verification Layer

Re-testing the fix and the surrounding functionality for regressions

Assessment Layer

Submission, model-answer comparison and Certificate of Completion

Task-wise Approach

1

STAGE 1

Orientation & Briefing

Introduction to Datacom, the team, and the client application

2

STAGE 2

Software Review

Examine features, UX, code structure and maintainability

3

STAGE 3

Plan Improvements

Consolidate findings into prioritised recommendations

4

STAGE 4

Identify Root Causes

Reproduce defects; trace each to its underlying cause

5

STAGE 5

Fix the Bugs

Implement and re-test corrective changes

6

STAGE 6

Submit & Complete

Compare against model answers; receive the certificate

EXPECTED OUTCOMES

Skills & Capabilities Gained

- ✓ Ability to review an unfamiliar web application methodically and describe its strengths and weaknesses clearly
- ✓ Skill in prioritising improvement recommendations by impact and effort, not listing observations at random
- ✓ Practical competence reading and navigating a codebase written by somebody else
- ✓ A systematic, hypothesis-driven approach to debugging — reproduce, isolate, diagnose, then fix
- ✓ Understanding why a root-cause fix is more durable than patching a visible symptom
- ✓ Working familiarity with browser developer tools and step-through debugging
- ✓ Improved technical communication — explaining a defect, its cause and its fix clearly
- ✓ Certificate of Completion issued by Forage on behalf of Datacom

CERTIFICATION

Successfully Completed

TASKS COMPLETED

Software Review; Identifying Root Causes and Fixing Bugs

ENROLMENT VERIFICATION CODE
